

SS.2

Match the student number and the student name in a multidimensional array

Clear all lines after the "Students: " header of the Subject section file

Append each term in the sorted, multidimensional student array to the subject section file.

SS

Get student numbers from the existing class file (will get none if there are no students yet)

Get student numbers from the matching name of the user input to the Valid student file.txt

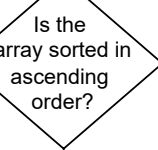

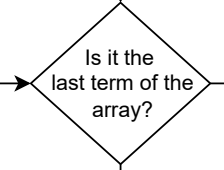

Add all these to an array

Remove each "24-" string and convert each number to an integer type

SS.1

SS.1

Iterate thru each term in the integer array

Convert back to strings and put back the "24-" segment

Retrieve the appropriate student name according to each student number in sorted array

SS.2
